Research Summary

Mulch films, also known as agricultural or farming films, are plastic materials used to cover the soil in agricultural fields. These films serve several purposes in crop production. They can help control weed growth by blocking sunlight from reaching the ground, preventing weed germination and growth. Mulch films also help to conserve moisture by reducing evaporation from the soil surface. This can be particularly beneficial in arid or dry regions where water availability is limited. Additionally, mulch films can regulate soil temperature, keeping it warmer during cooler months and preventing excessive heat buildup during warmer periods. This can promote better crop growth and yield. Mulch films are typically made from polyethylene or other biodegradable materials and are available in various colors and thicknesses to suit different crop types and growing conditions.

The major global manufacturers of Mulch Films include Shandong Qingtian Plastic, Harbin Suwu, Shandong Xinsu, Tianbao Plastic, Xinjiang Tianye Group, Shandong Tianhe Plastic, Barbier Group, Armando Alvarez Group, AEP Industries, Trioplast, RKW Group, Plastika Kritis, SHOUMAN, Berry Global, etc. The global players competition
