Research Summary

Multi-access laser micromachining is a laser-based manufacturing technique that enables the simultaneous machining or processing of multiple features on a workpiece. It involves the use of a high-power laser beam and precise control mechanisms to perform various micro-scale operations, such as cutting, drilling, welding, and surface modification, on a workpiece. By employing advanced beam splitting and focusing techniques, the laser beam can be divided into multiple beams that are directed towards different areas of the workpiece simultaneously. This allows for parallel processing and significant time savings compared to traditional single-point machining methods. Multi-access laser micromachining finds applications in the production of microelectronics, microfluidic devices, medical implants, precision components, and other industries where high precision and productivity are essential.

The major global manufacturers of Multi-access Laser Micromachining include 3D-Micromac, M-SOLV, Lasea, IPG Photonics Corporation, Electro Scientific Industries,

4JET microtech, etc. The global players competition landscape in this report is divided into three tiers.
