Research Summary

Multilayer co-extruded film refers to a type of packaging film that is created by simultaneously extruding multiple layers of molten plastic resins through a specially designed die. The process involves combining different polymer materials to achieve desired properties such as barrier properties, strength, flexibility, and optical clarity in a single film. Each layer of the multilayer film serves a specific purpose, such as providing oxygen or moisture resistance, improving heat-sealing properties, enhancing puncture resistance, or adding printability. The combination of these layers in a single film offers superior performance compared to single-layer films, making it suitable for various applications including food packaging, industrial packaging, medical packaging, and consumer goods. Multilayer co-extruded films can be customized to meet specific requirements, offering advantages such as extended shelf life for perishable products, protection against external factors, and enhanced visual appeal for product presentation.

The major global manufacturers of Multilayer Co-extruded Film include Mitsubishi
