Research Summary

A multilayer inductor is a type of inductor that consists of multiple layers of conductive material, typically copper, stacked together with insulating layers in between. This construction allows for a compact and efficient design, increasing the inductance value within a small form factor, which is ideal for modern electronic applications where space is limited. Multilayer inductors are widely used in high-frequency circuits, such as RF (radio frequency) applications, power supplies, and noise filtering, due to their ability to deliver stable inductance values and low resistance. By stacking several layers of windings, these inductors can handle higher currents and provide better performance than traditional wire-wound inductors, making them suitable for use in advanced technologies like smartphones, laptops, automotive electronics, and power management systems.

The major global manufacturers of Multilayer Inductor include TDK, Sunlord Electronics, Murata, Shenzhen Zhenhua Fu Electronics, Chilisin Electronics (YAGEO), Vishay, Kyocera, Taiyo Yuden, Fenghua Advanced Technology, KOHER (Shanghai) Electronic,
