Research Summary

Multilayer PET (Polyethylene Terephthalate) bottles are a type of packaging containers that are constructed with multiple layers of PET material. PET is a widely used plastic material known for its strength, clarity, and barrier properties. In the case of multilayer PET bottles, additional layers of PET or other materials such as ethylene vinyl alcohol (EVOH) or nylon are added to enhance the bottle's performance and functionality. These additional layers serve different purposes, such as improving oxygen or moisture barrier properties, increasing chemical resistance, providing UV protection, or adding rigidity to the bottle. Multilayer PET bottles are commonly used for packaging beverages, personal care products, pharmaceuticals, and other consumable goods where barrier properties, product freshness, and integrity over time are important. The multilayer construction allows for better preservation of the packaged contents, extending their shelf life and maintaining their quality while offering the durability and lightweight advantages of PET material.
