Research Summary

Multiple rocket launchers (MRLs) are military artillery systems designed to rapidly launch multiple rockets in a short period. They are typically mounted on a dedicated vehicle platform, such as a truck or a tracked chassis, and are equipped with a series of launch tubes or pods that can hold multiple rockets. MRLs provide a highly mobile and versatile means of delivering a concentrated barrage of rockets to a specified target area. They are capable of firing multiple rockets simultaneously or in rapid succession, allowing for a high volume of firepower to be delivered over a large area. MRLs are used for various purposes, including artillery support, counter-battery fire, saturation attacks, and area denial. Their range and effectiveness can vary depending on the specific model and type of rockets used.

The major global manufacturers of Multiple Rocket Launchers include Lockheed Martin, Norinco Group, Splav, Roketsan, Avibras, IMI, etc. The global players competition landscape in this report is divided into three tiers.
