Research Summary

A multipolar magnetizing fixture is a device used in the process of magnetization for magnetizable materials. It consists of a fixture with multiple poles or magnetic coils strategically placed to generate a controlled and uniform magnetic field. The multipolar configuration of the fixture allows for the efficient magnetization of complex-shaped components or assemblies. During the magnetization process, the workpiece is brought in close proximity to the poles or coils, and an electrical current is applied to generate a magnetic field. The multipolar design ensures that the magnetic field is distributed evenly across the workpiece, resulting in consistent and desired magnetic properties. Multipolar magnetizing fixtures find applications in various industries, including automotive, electronics, aerospace, and manufacturing, for tasks such as magnetizing permanent magnets, magnetic sensors, or magnetic assemblies.

The major global manufacturers of Multipolar Magnetizing Fixture include Laboratorio Elettrofisico, Magnet-Physik, Nihon Denji Sokki, Magnetic Instrumentation, MAGSYS Magnet Systeme, Magnet Laboratories, Ningbo Canmag Technology, Magnet Mingzhe,
