Research Summary

Multiwall polycarbonate is a type of polycarbonate sheeting that consists of multiple layers or walls separated by hollow chambers. It is a lightweight and durable material known for its high impact resistance, excellent thermal insulation properties, and UV protection. The multiple walls in the polycarbonate sheeting provide strength, rigidity, and structural integrity, making it suitable for a wide range of applications. Multiwall polycarbonate is commonly used in construction for skylights, roofing, and glazing due to its ability to transmit natural light while offering thermal efficiency. It is also utilized in the manufacturing of greenhouse panels, protective barriers, signage, and sound barriers. The multiwall structure of polycarbonate makes it strong, yet lightweight, allowing for easy installation and reducing the need for additional support structures. Its versatility, durability, and transparency make multiwall polycarbonate an appealing choice for various industries and applications.
