Research Summary

Mycelium leather, also commonly referred to as fungal leather or mushroom leather, is a innovative and sustainable alternative to traditional animal-based or synthetic leather materials. It is made from the mycelium, the root-like structure of fungi, particularly certain species of mushrooms. Mycelium leather is produced through a process where the mycelium is grown and cultivated on organic waste or agricultural byproducts. The mycelium network interweaves and binds the materials together, resulting in a strong and flexible material that can be shaped and used for various applications such as fashion, accessories, and upholstery. Mycelium leather offers several environmental benefits since it is biodegradable, requires less water and energy to produce compared to traditional leather, and does not involve animal cruelty. Its versatility and sustainable attributes make mycelium leather an exciting and promising option in the realm of eco-friendly and cruelty-free materials.
