Research Summary

Mycoprotein is a type of protein derived from a fungus called *Fusarium venenatum*. It is primarily used as a meat substitute and is commonly marketed under the brand name Quorn. Mycoprotein is produced through a fermentation process where glucose and other nutrients are provided to the fungus, allowing it to grow and form a fibrous texture. Once harvested, the mycoprotein is processed into various forms such as nuggets, patties, or minced meat-like products. Mycoprotein has gained popularity as a vegetarian or vegan alternative to meat due to its high protein content, low saturated fat content, and its ability to mimic the texture of meat. It is also a good source of dietary fiber and contains several important nutrients. Mycoprotein has a mild, neutral flavor, making it versatile and suitable for use in a variety of dishes. However, it should be noted that some individuals may have allergies or sensitivities to mycoprotein, and it is important to check for any potential adverse reactions before consuming it.

The major global manufacturers of Mycoprotein include Quorn/Monde Nissin Corporation, ENOUGH (3fbio Ltd), Mycorena, Mycovation, etc. The global players
