Research Summary

A mycotoxin adsorbent for feeds is a specialized additive designed to bind and neutralize mycotoxins present in animal feed, thereby reducing their absorption in the gastrointestinal tract of livestock. Mycotoxins are toxic compounds produced by certain fungi that can contaminate feed ingredients like grains and pose serious health risks to animals, including reduced productivity, immune suppression, and organ damage. Adsorbents, often made from materials such as bentonite clay, activated charcoal, or yeast cell wall extracts, work by physically binding to mycotoxins and preventing their bioavailability. These products are crucial in livestock management, safeguarding animal health, improving feed safety, and ensuring consistent performance in agricultural operations.
