Research Summary

N-Vanillylnonanamide, also known as capsaicin analog nonivamide, is a synthetic compound that shares structural similarities with capsaicin, the active component in chili peppers responsible for their spicy heat sensation. N-Vanillylnonanamide is often used as a less pungent alternative to capsaicin in various applications, including pharmaceuticals, cosmetics, and food additives. It exhibits mild to moderate agonist activity at the transient receptor potential vanilloid 1 (TRPV1) receptor, which is involved in pain and heat sensation. This compound has been studied for its potential therapeutic effects, such as its analgesic properties for pain relief and its use in topical creams for skin care and hair care products. N-Vanillylnonanamide is also used in the food industry to impart a mild spicy flavor without the intense heat associated with capsaicin, making it suitable for enhancing taste profiles in certain foods and beverages.

The major global manufacturers of N-Vanillylnonanamide include Hangzhou Great Forest Biomedical, Haihang Group, ULCHO Biochemical (FCAD Group), Ji'an Borui Spice Oil, Nanjing Sunshine Biotech, Shanghai Arbor Chemical, Synhwa Pharmachem,
