### Research Summary

Naphthalene (CAS 91-20-3) is a white crystalline solid with a distinct odor. It is a polycyclic aromatic hydrocarbon (PAH) composed of two benzene rings fused together. Naphthalene is derived from coal tar or petroleum and is commonly used as a precursor for the production of various chemicals and materials. It is widely known for its use as a moth repellent due to its strong odor and insecticidal properties. Naphthalene has a low melting point and sublimates at room temperature, meaning it can change from a solid to a gas without passing through a liquid phase. This characteristic makes it useful for applications such as manufacturing of dyes, resins, and plastics. However, naphthalene is also classified as a possible human carcinogen and exposure to high concentrations may have adverse health effects, including damage to the respiratory system and potential toxicity to the liver and kidneys. Therefore, proper handling and safety precautions should be followed when working with naphthalene.

The major global manufacturers of Naphthalene (CAS 91-20-3) include Baowu Carbon Material, Rain Industries, JFE Chemical, C-Chem, OCI, Koppers, Himadri, Baoshun,
