Research Summary

Naphthenic acid is a collective term for a mixture of organic acids that are found in crude oil, particularly in petroleum fractions known as naphtha. These acids are carboxylic acids with a cyclic structure composed of cyclopentane or cyclohexane rings. Naphthenic acids are naturally occurring and are formed during the thermal decomposition of crude oil components. They can vary in composition and concentration depending on the source of the crude oil. Naphthenic acids are known for their corrosive properties, and their presence in crude oil can cause issues in petroleum refining processes and in the transportation and storage of petroleum products. Naphthenic acids can react with metals, particularly during the refining process, leading to corrosion of equipment and pipelines. Efforts are made to remove or neutralize naphthenic acids during refining processes to minimize their harmful effects. Analyzing and understanding the composition and properties of naphthenic acids is important for the petroleum industry to ensure the efficient and safe processing of crude oil.

The major global manufacturers of Naphthenic Acid include Merichem, Umicore, Midas,

Fulltime, Sea Chemical, Changfeng, Ming Ring, Zhangming, Rare-Earth, etc. The global players competition landscape in this report is divided into three tiers.
