Research Summary

Natural fiber reinforced polymer composites are materials that combine natural fibers with a polymer matrix to create a composite material with enhanced mechanical properties. Natural fibers, such as jute, flax, hemp, sisal, and kenaf, are derived from plant sources and have gained popularity as an alternative to traditional synthetic fibers in composite manufacturing. These fibers offer advantages such as biodegradability, renewable sourcing, low density, and good specific strength and stiffness properties. When embedded in a polymer matrix, such as epoxy or polyester, the natural fibers provide reinforcement, improving the strength, stiffness, and overall performance of the composite material. Natural fiber reinforced polymer composites find applications in various industries, including automotive, aerospace, building and construction, and consumer goods, as they offer a more sustainable and eco-friendly alternative to traditional composites made solely from synthetic fibers.

The major global manufacturers of Natural Fiber Reinforced Polymer Composite include
