Research Summary

Natural Gas (CNG) compressors are specialized equipment used to compress natural gas to higher pressures, making it suitable for storage and transportation in compressed natural gas vehicles (NGVs) or for various industrial applications. CNG is a cleaner and more environmentally friendly alternative to conventional gasoline and diesel fuels, as it produces lower emissions and reduces greenhouse gas emissions. The CNG compressors take in raw natural gas from pipelines or other sources and compress it to a high-pressure level, typically between 3,000 to 3,600 pounds per square inch (psi), depending on the application and requirements. The compressed natural gas can then be stored in high-pressure cylinders or tanks, ready to be used in vehicles, commercial fleets, or other industrial processes. CNG compressors play a crucial role in the growing adoption of natural gas as a sustainable and economical fuel source, helping to reduce dependence on traditional fossil fuels and promote cleaner energy solutions.

The major global manufacturers of Natural Gas (CNG) Compressors include Siemens, Atlas Copco, MAN Energy Solutions, Kobelco, Exterran, Ingersoll Rand, Burckhardt,
