Research Summary

Natural gas is a naturally occurring hydrocarbon gas mixture primarily composed of methane (CH₄) along with small amounts of other gases such as ethane, propane, butane, and nitrogen. It is formed over millions of years from the decomposition of organic matter deep within the earth's crust and is typically found in underground reservoirs or associated with oil deposits. Natural gas is colorless, odorless, and lighter than air, making it a versatile and clean-burning fossil fuel used for various purposes such as heating homes and businesses, generating electricity in power plants, and fueling vehicles and industrial processes. It is often processed to remove impurities and extract valuable components such as ethane and propane for use as petrochemical feedstocks or liquefied natural gas (LNG) for transportation and storage. Natural gas is considered a cleaner alternative to coal and oil due to its lower carbon dioxide emissions and is an important component of global energy supply and transition to cleaner energy sources.

The major global manufacturers of Natural Gas include Linde Group, Praxair, Air Liquide S.A., Airgas, Taiyo Nippon Sanso, Air Products and Chemicals, Iwatani,

Welsco, Advanced Specialty Gases, Messer Group, etc. The global players competition landscape in this report is divided into three tiers.
