Research Summary

A Navigation Satellite System (NSS) is a system of satellites that provides positioning, navigation, and timing (PNT) services to users on Earth. It utilizes a constellation of satellites in space that broadcast signals containing precise timing information and orbital data. The most well-known navigation satellite systems are the Global Positioning System (GPS) developed by the United States and the Global Navigation Satellite System (GLONASS) developed by Russia. Other prominent systems include Europe's Galileo and China's BeiDou. These satellite systems work by triangulating signals from multiple satellites to determine a user's position, velocity, and time. Navigation satellite systems have become essential for a wide range of applications, including transportation, aviation, maritime navigation, surveying, mapping, and outdoor recreation. They offer accurate and reliable positioning information that enables users to determine their location and navigate with precision both on land and at sea.

The major global suppliers of Navigation Satellite System include Qualcomm, Trimble Navigation, Broadcom, CSR(Qualcomm), Laird PLC, Furuno Electric, Rockwell Collins,

Texas Instruments, Cobham, Hexagon, etc. The global players competition landscape in this report is divided into three tiers.
