Research Summary

A needleless IV connector is a medical device used to connect and secure intravenous tubing to a catheter or IV line without the need for a traditional needle. It consists of a small, hub-like structure that features multiple ports and valves to facilitate the infusion and administration of fluids and medications. Needleless IV connectors are designed to provide a safe and efficient connection between the IV line and the patient, eliminating the risk of needlestick injuries and significantly reducing the potential for contamination. These connectors typically incorporate mechanisms such as positive displacement, split septum, or mechanical valve systems to maintain the integrity of the IV line and prevent the entry of air or pathogens. Needleless IV connectors are widely used in healthcare settings, including hospitals, clinics, and home healthcare, to ensure the safe and reliable delivery of intravenous therapies, improving patient comfort and reducing the associated risks of traditional needle-based connections.

The major global manufacturers of Needleless IV Connector include ICU Medical, BD, B.Braun, Baxter, Vygon SA, Medtronic, Baihe Medical, Nexus Medical, Specath, RyMed
