Research Summary

A Neighborhood Electric Vehicle (NEV) is a type of small electric vehicle designed for local transportation within residential areas and low-speed urban environments. NEVs are typically four-wheeled vehicles that resemble golf carts but are equipped with additional safety features such as headlights, turn signals, mirrors, seat belts, and windshield wipers to comply with road regulations. They are powered by electric motors and use rechargeable batteries for propulsion, offering a quiet and environmentally friendly mode of transportation. NEVs generally have a top speed of around 25 to 35 miles per hour (40 to 56 kilometers per hour) and are primarily used for short-distance commuting, leisurely drives, and local errands. Due to their limited speed capabilities and safety features, NEVs are not suitable for highway travel and are primarily intended for use in designated neighborhoods or areas with low-speed limits. NEVs provide a convenient and energy-efficient transportation alternative, especially for short trips within confined areas.
