Research Summary

Neodymium-doped yttrium vanadate (NdYVO4) crystal is a type of solid-state crystal that uses yttrium vanadate as a host material with neodymium dopants. It is known for its excellent laser properties and is widely used as an active medium in solid-state lasers. The neodymium ions embedded in the crystal lattice of NdYVO4 can absorb and emit light at specific wavelengths, making it suitable for laser applications. NdYVO4 crystals exhibit high optical quality, stability, and efficiency, allowing for the production of compact and powerful lasers with various output wavelengths. These crystals are utilized in a range of fields, including scientific research, industrial manufacturing, telecommunications, and medical applications. NdYVO4 lasers are especially popular in areas such as material processing, laser marking, micromachining, and ophthalmology due to their superior performance and versatility.
