Research Summary

Neon gas is a colorless, odorless, and inert noble gas that belongs to the Group 18 (noble gases) of the periodic table. It is denoted by the chemical symbol Ne and is the second-lightest noble gas, after helium. Neon gets its name from the Greek word “neos,” meaning “new,” because it was discovered as a new element. Neon is most well-known for its distinctive bright red-orange glow when electrically excited, which makes it a popular choice for signs, advertising displays, and lighting applications. It is often used in neon signs, fluorescent lamps, and plasma displays due to its ability to emit light at relatively low voltages. Neon gas is chemically inert, meaning it is non-reactive and does not readily form compounds with other elements. It has various industrial uses, including in cryogenic applications, laser technology, and as a coolant in certain electric transformers. Additionally, neon gas is used in research and scientific experiments, particularly in cryogenics and high-voltage discharge lamps.

The major global manufacturers of Neon Gas include Air Liquide, Linde Group, Parxair, Messer Group, Iceblick, Air Products, Air Water, Core Gas, Baosteel, INGAS, Airgas, Matheson Tri-gas, etc. The global players competition landscape in this report is divided

into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
