Research Summary

Neonicotinoid pesticides are a class of insecticides that are chemically similar to nicotine and widely used in agriculture to protect crops from insect pests. They function by targeting the central nervous system of insects, binding to nicotinic acetylcholine receptors, which results in paralysis and eventual death. Neonicotinoids, such as imidacloprid, clothianidin, and thiamethoxam, are valued for their effectiveness at low concentrations and their relatively low toxicity to mammals. These pesticides can be applied in various forms, including soil treatments, seed coatings, and foliar sprays. However, their extensive use has raised significant environmental concerns, particularly regarding their detrimental effects on pollinators like bees, leading to regulatory restrictions in several regions to mitigate their impact on ecosystems.

The major global manufacturers of Neonicotinoid Pesticide include Bayer AG, Hailir, Sino-Agri United, QiLin Agricultural, Huasheng Chemical, Changlong Chemical, Huaxing Chemical, etc. The global players competition landscape in this report is divided into three tiers.
