Research Summary

Networked sound masking systems are audio solutions used to create a controlled and comfortable acoustical environment in a given space by generating a low-level background sound. Unlike traditional sound masking systems that operate independently, networked sound masking systems utilize network infrastructure and digital technology to distribute and control the sound masking throughout a facility or multiple locations. These systems consist of an array of speakers or emitters strategically placed in the ceiling or walls of a space, which emit a soft, uniform, and continuous sound. The networked aspect allows for centralized management and control of the sound masking levels, zones, and scheduling across different areas or buildings. Networked sound masking systems can be adjusted to match the specific acoustic needs of different areas, mitigate distractions, increase speech privacy, improve productivity, and enhance overall comfort and well-being in various environments like open offices, healthcare facilities, call centers, or educational institutions.

The major global suppliers of Networked Sound Masking Systems include Cambridge Sound Management, Soft DB, K.R.Moeller Associates, Lencore, Soundmask, AtlasIED, Speech Privacy Systems, AET, etc. The global players competition landscape in this report is divided into three tiers.
