### Research Summary

A neuroendoscope is a specialized medical instrument used by neurosurgeons and neurologists to perform minimally invasive procedures within the brain and nervous system. It consists of a thin, flexible tube with a tiny camera and light source attached to the tip, allowing for visualization of the inside of the brain and spinal cord.

Neuroendoscopes are typically inserted into the body through small incisions in the scalp or other entry points, such as the nose or mouth, and advanced to the target area using image guidance techniques such as fluoroscopy or MRI. Once in position, the camera provides real-time, high-definition images of the internal structures, enabling the surgeon to navigate and manipulate surgical instruments with precision.

Neuroendoscopy is commonly used for procedures such as tumor removal, cyst drainage, ventriculostomy, and treatment of hydrocephalus, offering patients less invasive alternatives to traditional open surgery, reduced risk of complications, and faster recovery times.

The major global manufacturers of Neuroendoscope include KARL STORZ, Richard

Wolf, Spinendos, joimax®, B.Braun, adeor medical, THINK, SCHINDLER, Shenyang Shenda Endoscope, Tian Song, HAWK Optical Electronic Instruments, etc. The global players competition landscape in this report is divided into three tiers.
