Research Summary

Ni-MH (Nickel-Metal Hydride) battery is a type of rechargeable battery that utilizes a combination of nickel-based positive electrodes and a metal hydride negative electrode. These batteries are an alternative to the traditional nickel-cadmium (Ni-Cd) batteries and offer several advantages. Ni-MH batteries have a higher energy density, allowing them to store more energy per unit volume or weight. They also have a lower memory effect, which means they can be recharged at any state of discharge without experiencing a reduced capacity. Ni-MH batteries have a longer cycle life, meaning they can be recharged and discharged more times before their performance starts to degrade. They are commonly used in various applications, including portable electronics, power tools, hybrid vehicles, and cordless phones. Ni-MH batteries are considered environmentally friendly as they do not contain toxic materials like cadmium, making them a popular choice for those seeking more sustainable and long-lasting rechargeable battery options.

The major global manufacturers of Ni-MH Battery include Primearth EV Energy, FDK,

GP Batteries International, Highpower International Inc, Corun, Panasonic, SAFT, Chunlan, Lexel Battery, EPT Battery Co.
