Research Summary

NiCd batteries, short for Nickel-Cadmium batteries, are rechargeable batteries that have been widely used for many years in various applications. They consist of a positive electrode made of nickel hydroxide, a negative electrode made of cadmium, and an electrolyte that allows the flow of ions between the electrodes. NiCd batteries are known for their high energy density, long cycle life, and ability to deliver consistent power output. They can be charged and discharged repeatedly, making them suitable for devices that require frequent use and recharging, such as portable electronics, power tools, and emergency backup systems. However, NiCd batteries have some environmental concerns due to the presence of cadmium, a toxic heavy metal. As a result, their usage has decreased in recent years, with many manufacturers and consumers opting for more environmentally-friendly battery technologies like nickel-metal hydride (NiMH) or lithium-ion (Li-ion) batteries.

The major global manufacturers of NiCd Batteries include Alcad, GAZ, EnerSys, Saft, GS Yuasa, Panasonic, Sino Energy, Power Sonic, Interberg Batteries, EverExceed,

BYD, HBL, ZEUS, Hoppecke, Kelong New Energy, UniKor Battery, Tridonic, etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
