### Research Summary

Nickel niobium, also known as niobium nickel, is an alloy composed primarily of nickel and niobium. The exact composition can vary depending on the desired properties and specific application. This alloy combines the unique characteristics of both nickel and niobium, resulting in improved mechanical and magnetic properties. Nickel niobium alloys exhibit high strength, excellent heat resistance, and good corrosion resistance. They also possess high magnetic permeability and low coercivity, making them ideal for applications in the electronics and telecommunications industries. These alloys are commonly used in the production of magnetic shielding components, such as shields for electronic devices to prevent interference from external magnetic fields. Nickel niobium alloys are also used in superconducting applications, including magnets for scientific research, particle accelerators, and medical imaging devices. Their unique properties make them valuable in industries where high strength, toughness, corrosion resistance, and magnetic characteristics are required.

The major global manufacturers of Nickel Niobium include H.C. Starck, COMETAL, KBM Affilips, Westbrook Resources, AMG Superalloy, Metalink, Reading Alloys,

Kennametal, etc. The global players competition landscape in this report is divided into three tiers.
