Research Summary

Nickel-plated steel sheet refers to a steel sheet that has been coated with a layer of nickel through a process known as electroplating. The electroplating process involves immersing the steel sheet in a bath containing a nickel salt solution and passing an electric current through it. This causes the nickel ions to be reduced and deposited onto the surface of the steel sheet, forming a thin layer of nickel. Nickel plating provides several benefits to the steel sheet, including enhanced corrosion resistance, improved durability, and aesthetic appeal. The nickel layer acts as a protective barrier against rust and oxidation, increasing the sheet's longevity and preventing deterioration. Nickel-plated steel sheets are commonly used in applications where corrosion resistance is essential, such as automotive components, household appliances, decorative items, and electronic devices. They offer the strength and structural properties of steel along with the added protection and attractive appearance provided by the nickel coating.

The major global manufacturers of Nickel-plated Steel Sheet include Toyo Kohan, NIPPON STEEL, Tata Steel, TCC Steel, Zhongshan Sanmei, Jiangsu Jiutian,

Nonfemet, Yongsheng New Material, etc. The global players competition landscape in this report is divided into three tiers.
