### Research Summary

A night light is a small, low-intensity light source that is designed to provide a gentle illumination in dark environments, particularly during nighttime hours. Night lights are commonly used in bedrooms, nurseries, and hallways to help people navigate their surroundings without the need for bright lights that can disrupt sleep. They are often equipped with a soft, diffused light that provides enough visibility to move around the area safely. Night lights come in various forms, including plug-in models that fit directly into electrical outlets, portable lights that can be moved around, and those integrated into other objects like lamps or stuffed animals. They are commonly used to comfort young children who may be afraid of the dark and provide a soothing environment for sleep. Night lights can also serve as helpful aids for caregivers, allowing them to check on infants or elderly individuals during the night without disturbing their sleep patterns. Additionally, some night lights feature additional features like automatic sensors that turn on and off based on ambient lighting conditions or timers to conserve energy.
