Research Summary

Nitrogen trifluoride (NF₃) is a chemical compound composed of one nitrogen atom and three fluorine atoms. It is commonly referred to by its trade name MCP-1381. NF₃ is a colorless, odorless gas that is chemically stable and nonflammable. It has a wide range of applications, primarily in the electronics industry. NF₃ is primarily used as a cleaning agent for the removal of oxide residues from the surfaces of electronic components during semiconductor manufacturing processes. It is highly effective in removing contaminants and has a low reactivity with metals and other materials commonly used in electronic devices. Another notable application of NF₃ is as a greenhouse gas used in manufacturing facilities for emissions abatement. It has a relatively long atmospheric lifetime and a high Global Warming Potential (GWP), contributing to concerns about its environmental impact. Proper handling and disposal of NF₃ are crucial to mitigate potential environmental risks.

The major global manufacturers of Nitrogen Trifluoride (NF₃) (MCP-1381) include SK
