### Research Summary

Nitroglycerin is an active pharmaceutical ingredient (API) used in the production of medications for the treatment of various cardiovascular conditions. It is a powerful vasodilator, meaning it widens or relaxes the blood vessels, improving blood flow. Nitroglycerin API is typically used in the formulation of medications for the management of angina pectoris, a condition characterized by chest pain caused by inadequate blood supply to the heart. Nitroglycerin works by releasing nitric oxide, which leads to the relaxation of smooth muscles in blood vessels, resulting in increased oxygen supply to the heart muscle. It can be administered orally in the form of tablets, sublingually as a spray or under the tongue, or as a transdermal patch for slow and controlled absorption. Nitroglycerin is a potent medication with potential side effects and specific storage requirements due to its explosive nature, necessitating proper handling and adherence to safety protocols during its manufacturing and use in medications.

The major global manufacturers of Nitroglycerin API include Novasep, Copperhead Chemical, Dipharma, Cambrex, SD Sinepharm, Bharat Pharma, Dorsa Pharmaceutical,

etc. The global players competition landscape in this report is divided into three tiers.
