Research Summary

Nitromethane is a chemical compound with the molecular formula CH_3NO_2 . It is a clear, colorless liquid with a distinctive odor. Nitromethane is a highly volatile and flammable compound that finds application in various industries and sectors. One of its primary uses is as a solvent and intermediate in chemical synthesis, particularly in the production of pharmaceuticals, pesticides, and dyes. It is also used as a fuel additive in racing and high-performance engines, such as drag racing and model engines, due to its high oxygen content and ability to enhance the combustion efficiency. In addition to its use as a solvent and fuel additive, nitromethane is also employed as an ingredient in explosives and propellants, including in the synthesis of explosives like trinitrotoluene (TNT) and in rocket motors. It is essential to handle nitromethane with great care, due to its flammability and potential hazards associated with its use.

The major global manufacturers of Nitromethane include ANGUS, Yuan Bo Chemical, Zibo Xinglu Chemical Factory, Hubei Grand Fuch, Xinghui Chemical, Shandong Baoyuan Chemical, Wujiang Bolin Industry, etc. The global players competition
