Research Summary

N,N-Methylene bisacrylamide (MBA) is a chemical compound with the molecular formula $C_7H_{10}N_2O_2$. It is a white crystalline solid that is highly soluble in water and polar organic solvents. MBA is a crosslinking agent commonly used in polymerization reactions, particularly in the production of polyacrylamide gels. In polymer chemistry, it serves as a crucial component in the formation of three-dimensional polymer networks, providing structural integrity and stability to the resulting gels. MBA enables the formation of strong chemical bonds, or crosslinks, between polymer chains, leading to increased viscosity and gelation. This crosslinking property is utilized in various applications, such as gel electrophoresis for DNA and protein separation, chromatography column packing, and controlled drug release systems. MBA also finds use in the synthesis of hydrogels, adhesives, and coatings, owing to its ability to enhance mechanical strength and chemical stability in the resulting products. However, it is important to handle N,N-Methylene bisacrylamide with care, as it can be toxic and potentially harmful if ingested or inhaled. Proper precautions should be followed to

ensure safe handling and disposal.
