### Research Summary

A noise barrier, also commonly referred to as a soundwall, is a structure designed to reduce the transmission of noise from one area to another. It is typically a physical barrier constructed to block, absorb, or reflect sound waves, thereby mitigating the impact of noise pollution on nearby communities, buildings, or sensitive areas. Noise barriers are commonly used alongside highways, railways, industrial sites, and airports to create a buffer zone between the noise source and the surrounding environment. These barriers can be made of various materials, such as concrete, masonry, metal, or heavily insulated panels, depending on the specific requirements and desired noise reduction levels. The height, width, and design of the barrier play essential roles in its effectiveness, as they determine how much sound is absorbed or reflected. Additionally, noise barriers can be aesthetically designed to blend with the surroundings or showcase artwork, offering both functional and visual benefits. Overall, by minimizing the propagation of sound waves, noise barriers contribute to reducing noise pollution and improving the quality of life in affected areas.

The major global manufacturers of Noise Barrier (Soundwall) include Evonik Industries, Industrial Noise Control, Armtec, DELTA BLOC International, Noise Barriers, SFS, Paragon Noise Barriers, SEAC, Kinetics Noise Control, REBLOC, Jacksons Fencing, etc. The global players competition landscape in this report is divided into three tiers.
