### Research Summary

A noise dosimeter is a portable device used to measure and assess a person's exposure to noise over a certain period of time. It is commonly used in occupational settings to monitor and evaluate an individual's noise exposure levels. The dosimeter is typically worn by the person being monitored and captures data such as sound pressure levels (SPL), duration of exposure, and frequency distribution of noise. This data is then analyzed to determine the individual's noise exposure, compliance with regulatory standards, and potential risks to hearing health. The noise dosimeter provides a comprehensive assessment of exposure, taking into account variations in noise levels throughout the day, enabling more accurate evaluations compared to a single-point measurement.

The major global manufacturers of Noise Dosimeters include Bruel & Kjaer, Cirrus Research, TSI-Quest, RION, Casella, Svantek, Norsonic, NTi Audio, Larson Davis, Acoem, Aihua, Pulsar Instruments, ONO SOKKI, Testo SE & Co, TES Electrical Electronic, Hioki, BSWA, etc. The global players competition landscape in this report is
