Research Summary

Noise measuring equipment refers to devices or instruments used to quantify and analyze sound levels in various environments. It includes a range of tools designed to capture, measure, and analyze sound parameters such as sound pressure level (SPL), frequency distribution, and duration. Common noise measuring equipment includes sound level meters, which are handheld devices that measure sound levels in decibels (dB) and provide real-time readings. These meters often have various settings and filters to capture specific frequency ranges and assess compliance with noise regulations. Additionally, advanced noise measuring equipment may include noise dosimeters, which are portable devices worn by individuals to monitor their personal exposure to noise over a given time period. These instruments play a vital role in occupational health and safety, environmental monitoring, noise pollution assessment, and compliance with noise regulations.

The major global manufacturers of Noise Measuring Equipment include Brüel & Kjær, Cirrus, 3M, Norsonic, RION, SVANTEK, Casella, Larson Davis, etc. The global players
