### Research Summary

Noise monitoring stations are dedicated installations or setups used for continuous or periodic monitoring of noise levels in specific locations or areas. These stations generally consist of specialized equipment and sensors that measure and record various parameters related to sound, such as sound pressure levels (SPL), frequency distribution, and duration. They are typically placed in areas of interest, such as urban environments, industrial zones, construction sites, or locations near airports and highways, where noise impacts are significant. The collected data provides important insights into noise pollution patterns and trends, helps identify noise sources, and assists in assessing compliance with noise regulations. Noise monitoring stations can be used for long-term monitoring programs, noise impact assessments, community noise studies, and other research or regulatory purposes to facilitate effective noise management and mitigation efforts.

The major global manufacturers of Noise Monitoring Stations include Bruel & Kjaer, Acoem, SVANTEK, AVA Monitoring, Larson Davis, Norsoni, Sigicom, Casella,

PCE Instruments, Nihon Onkyo Engineering, Topsonic Systemhaus, Cirrus Research, NTi Audio, Sinus Messtechnik, Sonitus Systems, etc. The global players competition landscape in this report is divided into three tiers.
