Research Summary

A non-agriculture smart irrigation controller is an advanced device designed to optimize water usage in non-agricultural settings such as residential, commercial, and public landscapes. It is a controller system that manages and regulates irrigation schedules based on real-time data and environmental factors. The controller utilizes sensors, weather forecasts, and other input sources to determine the ideal amount of water needed for efficient irrigation. By taking into account variables such as soil moisture levels, temperature, rainfall predictions, and evaporation rates, the smart irrigation controller ensures that plants receive the appropriate amount of water, reducing wastage and conserving resources. It typically features automated scheduling, remote access, and monitoring capabilities, allowing users to adjust and manage irrigation settings conveniently through applications or online platforms. The non-agriculture smart irrigation controller helps promote water conservation, maintain healthy landscapes, and ultimately reduces water costs and environmental impact in urban and non-agricultural settings.
