Research Summary

A non-fused switch-disconnector is an electrical switching device that combines the functions of a switch and a disconnecter in one unit. It is used to disconnect or isolate electrical circuits from the power supply for maintenance, repair, or safety purposes. Unlike a fused switch-disconnector, which incorporates circuit protection fuses, a non-fused switch-disconnector does not have built-in fuses. Instead, it provides a solid and reliable means of breaking the electrical circuit without the protection against overcurrent that fuses provide. Non-fused switch-disconnectors are typically used in situations where fuses are not required or when the protection provided by fuses is already incorporated elsewhere in the system. These devices are available in various sizes, current ratings, and configurations to suit different applications, ranging from residential to industrial installations. They are designed to meet relevant safety standards, ensuring safe operation and providing a visible means of isolation and control over the electrical circuit.

The major global manufacturers of Non-Fused Switch Disconnecter include ABB,

Schneider Electric, Eaton, Siemens, Rockwell Automation, Legrand, Mitsubishi Electric, Mersen, Leviton, nVent, Socomec, Lovato Electric, CHINT Electrics, Craig & Derricott, Ronk, Kraus & Naimer, Delixi Group, etc. The global players competition landscape in this report is divided into three tiers.
