### Research Summary

Non-GMO soybeans are soybean plants that have not been genetically modified through the use of biotechnology techniques. Traditional breeding methods are used to develop and cultivate these soybeans. Unlike genetically modified organisms (GMOs), non-GMO soybeans have not had their genetic material altered through the introduction of foreign genes or DNA sequences. Non-GMO soybeans are grown from seeds that are bred to be genetically stable and do not contain traits such as herbicide resistance or insect resistance that are commonly found in genetically modified soybeans. Some consumers prefer non-GMO soybeans due to concerns about potential health and environmental impacts associated with GMOs, and non-GMO soybeans are often used in products that cater to this consumer demand. It is worth noting that there are regulations and standards in different regions that define the criteria for labeling and verifying non-GMO products.

The major global manufacturers of Non-GMO Soybean include Amaggi, Yuwang Group, Puris Proteins, Primavera, Sojaprotein, Grain Millers, Clarkson Grain Company,
