Research Summary

A non-medical infrared thermometer is a device used to measure surface temperature without making physical contact. It works by detecting and measuring the infrared energy emitted by an object, converting it into an electrical signal, and displaying the temperature reading on a screen. Non-medical infrared thermometers are commonly used in various settings such as homes, workplaces, and public spaces to quickly and conveniently measure the temperature of objects, liquids, and surfaces. However, it's important to note that non-medical infrared thermometers are not designed or approved for measuring human body temperature and should not be used as a substitute for medical-grade thermometers in healthcare settings or for diagnosing illnesses.
