### Research Summary

Non-PVC medical film refers to a type of film used in the healthcare industry that is free from polyvinyl chloride (PVC) materials. PVC is commonly present in various medical products, including films, but it has been associated with environmental concerns and potential health risks due to the presence of plasticizers like phthalates. Non-PVC medical films are manufactured using alternative materials such as polyolefin or polyethylene, which do not contain PVC or plasticizers. These films are used in a wide range of applications including medical packaging, wound dressings, surgical drapes, and medical device components. Non-PVC medical films provide similar functionality and performance as PVC films but offer a more sustainable and potentially safer alternative. The use of non-PVC medical films aligns with the healthcare industry's efforts to reduce PVC usage and promote environmentally friendly and patient-safe practices.

The major global manufacturers of Non-PVC Medical Film include Baxter, Renolit Group, Fresenius, UJOIN Medical, Sealed Air, PolyCine, Teknor Apex, etc. The global
