Research Summary

Non-stick pans are a type of cookware that features a special coating on the cooking surface to prevent food from sticking during the cooking process. The coating is typically made from materials like polytetrafluoroethylene (PTFE), commonly known as Teflon, or ceramic. The non-stick properties allow for easy food release and make cooking delicate items like eggs, pancakes, and fish more convenient, as the food slides off effortlessly. Non-stick pans also require less oil or butter for cooking, promoting a healthier cooking experience. Cleaning non-stick pans is generally easier compared to traditional pans, as food residues are less likely to adhere to the surface. However, it is essential to use non-metal utensils and avoid using high heat or abrasive cleaning tools that could damage the non-stick coating. Proper care and maintenance are necessary to prolong the lifespan of non-stick pans and maintain their non-stick functionality.

The major global manufacturers of Non-Stick Pans include SEB, Meyer Corporation, NEWELL, BERNDES, Maspion, The Cookware Company, Neoflam, TTK Prestige, Hawkins Cookers, Cuisinart, Le Creuset, Cinsa, China ASD, Nanlong, Sanhe
