Research Summary

Non-tire synthetic refers to synthetic rubber materials that are used in various applications outside of the tire industry. Synthetic rubber is a man-made polymer that exhibits properties similar to natural rubber but with enhanced characteristics such as improved durability, resistance to weathering, and chemical stability. Non-tire synthetic rubber is commonly utilized in the production of a wide range of products, including industrial hoses, belts, gaskets, seals, footwear, sports equipment, adhesives, and many other rubber-molded or extruded items. These materials offer advantages such as versatility, consistent quality, and the ability to tailor properties to specific application requirements. Non-tire synthetic rubber provides manufacturers with a reliable alternative to natural rubber, offering performance attributes that are essential for various industries and applications where specific rubber properties are crucial.
