### Research Summary

A non-vascular stent is a medical device used for supporting and maintaining the patency of non-vascular, or non-blood vessel, structures in the body. Unlike vascular stents that are designed for use within blood vessels, non-vascular stents are utilized in various anatomical locations such as the digestive system, respiratory system, and urinary tract. Non-vascular stents are typically made from biocompatible materials like silicone, metal alloys, or polymers and come in different shapes and sizes to suit specific applications. They are deployed using minimally invasive techniques and can be temporary or permanent, depending on the patient's needs. Non-vascular stents serve as a scaffolding or support structure, preventing the collapse or obstruction of anatomical passages due to strictures, tumors, or other conditions. They can be used in interventions for the esophagus, bile ducts, intestines, ureters, and bronchi, among other non-vascular areas, to relieve symptoms, enhance organ function, and improve overall patient well-being.

The major global manufacturers of Non Vascular Stent include Boston Scientific, C.R. Bard, Cook Medical, Olympus, B. Braun, Medtronic, M.I.Tech, Taewoong Medical, Merit
