Research Summary

Non-woven abrasive locking discs are tools used in various industries for surface preparation, grinding, and finishing applications. These discs are made of non-woven synthetic fibers that are coated with abrasive particles, such as aluminum oxide or silicon carbide. Unlike traditional abrasive discs, non-woven abrasive locking discs do not have a fixed backing material like cloth or paper. Instead, they use a hook and loop fastening system, allowing them to be easily attached and secured to a compatible backing pad or mandrel. This design offers quick and convenient disc changes during operations. Non-woven abrasive locking discs are known for their versatility, as they are effective in removing rust, corrosion, paint, and other surface contaminants while providing a consistent abrasive action. They are commonly used in metalworking, woodworking, automotive, and general maintenance applications.
