Research Summary

Nonstick cookware refers to a type of cookware that features a specialized coating on its cooking surface to prevent food from sticking during the cooking process. These coatings are typically made from materials such as polytetrafluoroethylene (PTFE), commonly known as Teflon, or ceramic. The nonstick coating creates a smooth, slippery surface that helps food slide off easily without the need for excessive oil or butter. Nonstick cookware is particularly popular for cooking delicate items like eggs, pancakes, and fish, as it allows for effortless flipping and prevents the food from tearing or sticking to the pan. Additionally, nonstick cookware is generally easier to clean, as food residues are less likely to cling to the surface. It is important to follow the manufacturer's instructions for proper use and care of nonstick cookware to ensure its longevity and to avoid damaging the coating.

The major global manufacturers of Nonstick Cookware include SEB, Meyer Corporation, NEWELL, BERNDDES, Maspion, The Cookware Company, Neoflam, TTK Prestige, Hawkins Cookers, Cuisinart, Cinsa, China ASD, Nanlong, Sanhe Kitchenware, Cooker
