Research Summary

An occupancy sensor, also known as an occupancy detector or motion sensor, is a device that detects and monitors the presence or absence of people within a defined space. It utilizes various technologies, such as infrared, ultrasonic, microwave, or combined sensor technologies, to detect motion, heat, or sound. When a person enters or moves within the monitored area, the occupancy sensor detects the change and triggers a response, such as turning on lights, adjusting temperature settings, or activating ventilation systems. Conversely, when no movement or presence is detected for a specified period, the sensor signals the system to turn off or reduce power consumption. Occupancy sensors are commonly used in commercial buildings, homes, and public spaces to enhance energy efficiency, increase convenience, and promote cost savings by ensuring that lighting, heating, and cooling are only active when needed. Additionally, occupancy sensors contribute to building security by detecting unauthorized entries or unusual activity in monitored areas.

The major global manufacturers of Occupancy Sensor include Signify, Schneider

Electric, Honeywell, GE Current, Johnson Controls, Crestron Electronics, Legrand, Lutron Electronics, Acuity Brands, Leviton Manufacturing, OPTEx, Enerlites, Hubbell, ATSS, etc. The global players competition landscape in this report is divided into three tiers.
