Research Summary

Odour control textiles, also known as odor-resistant textiles or anti-odor fabrics, are specially designed materials that help to minimize or prevent unpleasant odours from developing or persisting in clothing or other textile products. These textiles are typically treated with various technologies and finishes that inhibit the growth of odor-causing bacteria and fungi. Odour control textiles can be made from natural fibers like cotton or wool, as well as synthetic fibers such as polyester or nylon. The technologies used to impart odour control properties vary and can include antimicrobial treatments, silver or copper nanoparticles, or specialized fabric structures that enhance breathability and moisture management. These textiles are particularly useful in athletic wear, socks, underwear, and other garments where sweat and body odour can be a concern. Odour control textiles help to keep clothing smelling fresh for longer periods, reduce the need for frequent washing, and enhance overall wearer comfort.

The major global manufacturers of Odour Control Textiles include Indorama Ventures, Crypton, Schoeller Textiles, Milliken, Herculite, FilSpec, Lenzing, Unitika, Tiong Liong,
